

Job Management - Programming Interfaces

Programming Interfaces

JobScheduler comes with an interface that allows jobs to be monitored and manipulated:

- XML Interface:
 - [XML Interface](#)
 - This interface allows JobScheduler objects to be monitored and manipulated - for example, by external applications or job scripts that create and run jobs:

Communication Interfaces

- The JobScheduler REST Interface is used for communication between Master and Agent JobSchedulers:
 - [How To - REST Interface](#)
- A SOAP Interface can be used for communication between JobScheduler and specific jobs or job chains:
